Introduction

Following all the historical series of data disaggregated by areas and institutes that has been elaborated annually since 2011 (available at: <http://www.csic.es/web/guest/datos-sobre-el-csic>), the present document facilitates information regarding the scientific/technical activity of the institutes and centres corresponding to 2019.

Once again, the information is presented by Autonomous Communities and by global areas instead of the traditional breakdown by scientific-technical areas. The global area SOCIETY includes the institutes of humanities and social sciences; the global area LIFE includes the institutes of biology and biomedicine, natural resources, agricultural sciences and food science and technology; the global area MATERIA includes the institutes of materials science and technology, physical science and technology and chemical science and technology.

In addition to the information by scientific-technical areas, the information aggregated by Autonomous Communities is included.

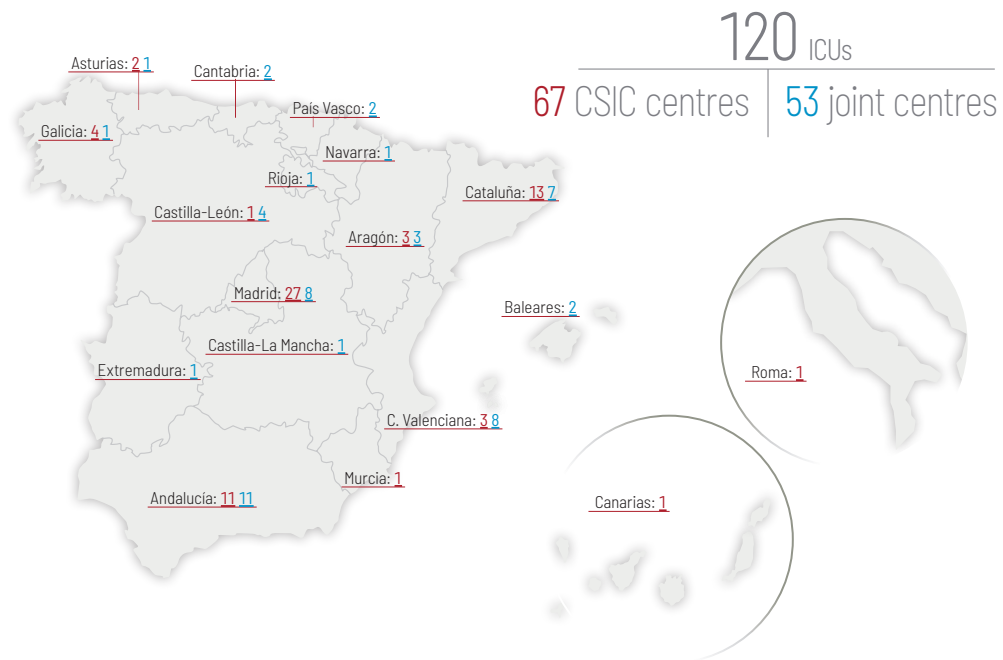

The data gathered in the document are:

- Number of projects initiated in 2019, number of ongoing projects within the same year and the corresponding funding to that annuity, together with the data from 2018 for comparison purposes.
- Recognition as a centre of excellence Severo Ochoa or María de Maeztu.
- Number of projects awarded by the ERC according to their typology.
- Staff that Personnel who as of 31 December 2019 appeared as active in their respective institute or centre, distinguishing between research staff who are public employees or contract staff; research staff in training (only includes data on pre-doctoral contract staff); scientific and technical support staff and contract staff; management staff and contract staff (only the staff that is not featured in the Public Research Organisms scale and recruitment staff not featured in technical and professional activities).
- Knowledge Transfer: number of patents applied for (priority); number of PCT international patents; number of exploitation license contracts; number of objects licensed and number of technology-based compa-

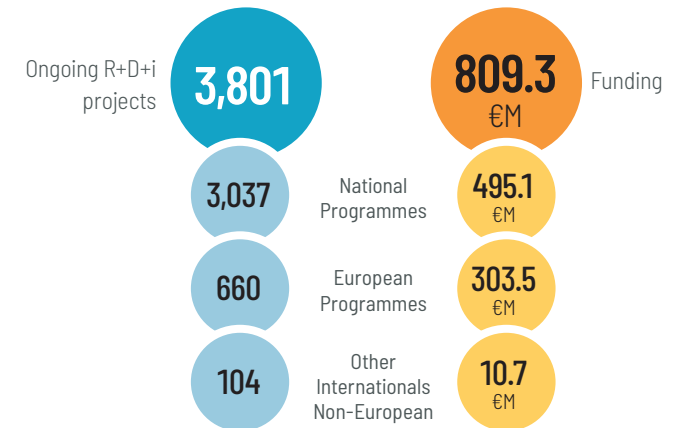

nies created. Other indicators have been incorporated this year: trademarks, utility models, biological material, software, plant varieties and industrial secrets.

- Scientific contribution: number of indexed articles, non-indexed articles, book chapters and books.
- Participation in conferences: number of communications and posters presented in national and international conferences.
- Dissemination activities.
- Research training activities: number of theses defended and training hours in post-graduate courses.

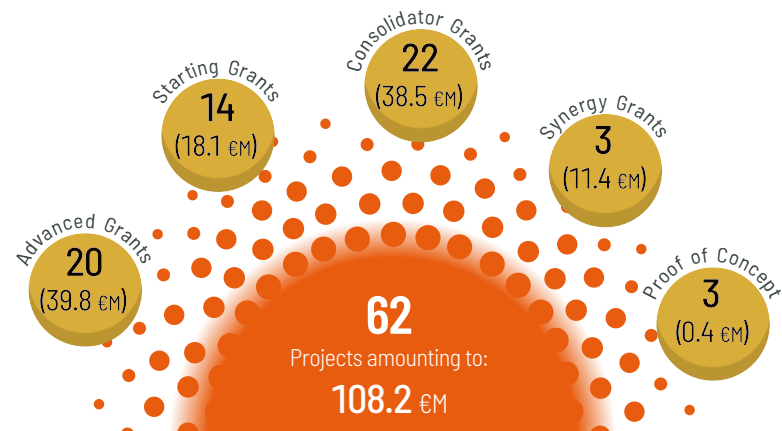

The staff data are based on information provided by the Assistant Secretariat General for Human Resources (SGARH); those of projects have been provided by the Assistant Secretary-General for Information Technology; the data on information transfer provided by the Deputy Vice-Presidency for Knowledge Transfer (VATC) and the data on training, dissemination, scientific production and conferences have been obtained from an exploitation of the CONCIENCIA database as of 20 May 2020.
